SUMMARY

Full-stack and GenAI engineer, about 3 years of experience (since 2023). Merged fixes in open source (Magnitude #120 and #125 security fix, Reflex, Gitea) reviewed by maintainers. Built web apps (React, Next.js, Node.js, Python, FastAPI), AI agent workflows, and integrations as a founding engineer. Strong at end-to-end debugging: reproduce, trace logs, network calls, and database state to root cause, then fix or escalate with a clear report. Hands-on with LLM failure modes and evaluation. Available 6 days a week with heavy Pacific Time overlap.

SKILLS

Languages: TypeScript, JavaScript, Python, SQL
Debugging and Support: End-to-End Debugging, Root-Cause Analysis, Bug Reproduction, Logs and Telemetry, Network Inspection, Database Queries, Issue Triage and Escalation, Runbooks and Documentation
AI: LLM APIs (OpenAI, Anthropic), Generative AI, AI Agents, Agent Orchestration, LangChain, AutoGPT, Fine-Tuning LLMs, Prompt Refinement, Prompt Chains, Chain-of-Thought Debugging, RAG, LLM Evaluation, Hallucination and Failure-Mode Analysis, Model Benchmarking
Web: React.js, Next.js, Node.js, FastAPI, Flask, REST APIs
Integrations and Infrastructure: Gmail API, Slack API, OAuth, Webhooks, GCP, Docker, CI/CD, MongoDB

OPEN SOURCE

- Merged into Magnitude: #120 and #125, a security fix for a remote API-key gate bypass, reworked to the maintainer's spec and merged with regression tests. Also merged: Reflex (#7275) and Gitea (#39155).
- Contributor across 5+ repositories with 20+ PRs mentored or reviewed; triaged issues and communicated root causes and fixes clearly with maintainers; hands-on with GitHub Actions, CI/CD, and collaborative development.

EXPERIENCE

Founding Full-Stack Engineer, Stealth AI Startup (NDA) | Jan 2025 - Present

- Joined as a founding engineer, owning product features, AI workflows, backend services, and infrastructure with TypeScript, Next.js, Node.js, Python, FastAPI, and LLM APIs.
- Investigate production issues end to end - reproduce bugs, trace logs, network requests, and database state to root cause; escalate real defects with repro steps and resolve the rest through configuration, prompt refinement, or clear user guidance.
- Built AI agent workflows and integrations (Gmail, Slack, OAuth, webhooks, browser automation); debug chain-of-thought, prompt chains, tool calls, and hallucinations, using test-and-feedback loops to evaluate agent outputs.
- Shipped frequent production changes through Docker and GCP CI/CD, reducing deployment failures by 57%.

AI Evaluation Contractor, Alignerr | Through Aug 2026

- Paid AI evaluation work: judged generative-model outputs against rubrics and wrote precise feedback on edge cases, hallucinations, and reasoning errors - why an output failed and what a correct response needed.

Full Stack Developer Intern, SmartInternz | May 2024 - Jul 2024

- Built a MERN-based college infrastructure platform supporting 4 user roles and 10+ departments, with RBAC, approval workflows, and fault reporting that cut manual administrative work by 40-60%.

PROJECTS

HealthyChef, Invoicing and Pantry Tracker | React 19, TypeScript, Vite, Tailwind, Express, Zod, Vercel | github.com/Nitish-1303/HealthyChef

- Built a full-stack invoicing and pantry tracker for meal-prep businesses: GST/discount calculation, server-numbered invoices, paid/pending/overdue tracking, PDF export and email.
- Deployed on Vercel (static frontend plus Express as a serverless function, data in Vercel Blob); the README embeds a full walkthrough video.

CipherBill, Privacy-First Invoicing on Starknet | TypeScript, Starknet | github.com/Nitish-1303/CipherBill

- Built a privacy-first invoicing app on Starknet with shielded balances, private transfers, and selective disclosure for accounting; wallet and private-transfer flow work, invoices and receipts in progress. Demo video in the README.

Migma x Spotify, Playlist-to-Campaign Plugin | TypeScript, Spicetify | migma-wireframe.vercel.app

- Built a Spicetify custom app that lives in Spotify's sidebar, topbar, and right-click menu: turns any playlist or track into a campaign draft (audience digest from real metadata, email preview, save to Migma as a draft). Live wireframe and demo video.

EDUCATION

B.Tech in Computer Science and Engineering, Baba Institute of Technology and Sciences | 2021 - 2025 | GPA: 8.56/10
